About Me

I'm a highly skilled, versatile, and **backend-heavy full-stack developer**, passionate about building **robust, modular, and scalable applications** that solve real-world problems. A proud graduate of **Rwanda Coding Academy**, I've acquired a wide-ranging skill set that combines **software engineering, embedded systems, cybersecurity, and AI fundamentals**. My focus on backend architecture, coupled with frontend proficiency and systems programming, enables me to deliver **end-to-end solutions** that are both performant and secure.

Throughout my journey, I've remained committed to **clean code, system design best practices, and collaborative development**. I thrive in dynamic environments where I can apply my deep technical knowledge and contribute meaningfully to teams, products, and user experiences.

Technical Skillset

Programming Languages

- Python, JavaScript (Node.js, React.js), C/C++, Java, PHP, Bash/Shell

Backend Technologies

- Django, Flask, Express.js, Spring Boot
- REST APIs, GraphQL, JWT/OAuth2 Authentication
- Microservices, Modular System Design
- Message Queues (Celery, RabbitMQ)

Databases

- PostgreSQL, MySQL, MongoDB, SQLite, Redis
- Database Modeling, Joins, Indexing, Optimization

Frontend Technologies

- React.js, Tailwind CSS, Bootstrap, HTML5/CSS3
- UI/UX Principles, Responsive Design, Form Validation
- GUI Design with Figma and Adobe XD

DevOps & Deployment

- Git/GitHub, GitLab, Docker, CI/CD (GitHub Actions, GitLab CI)
- Linux Command Line, Nginx, Apache
- Cloud: AWS, Heroku, Render

Cybersecurity Skills

- Ethical Hacking (Kali Linux, Nmap, Metasploit)
- Network Security, Firewalls, VPNs
- Secure Coding Practices (OWASP), Password Hashing, TLS/SSL
- Digital Forensics & Vulnerability Assessment Tools

Embedded Systems & IoT

- Arduino, Raspberry Pi
- Low-level Programming in C/C++
- Sensor & Actuator Integration

- Real-time Systems Debugging

AI & Data Science Fundamentals

- Python (NumPy, Pandas, Scikit-learn)
- Machine Learning Basics, Data Preprocessing
- Simple Predictive Modeling Projects

Creative Computing & 3D/UI Design

- 3D Modeling & Animation (Blender, TinkerCAD, Unity)
- Game Logic, Interactive Storytelling
- GUI for hardware interfaces (e.g., embedded system control dashboards)

Testing & Quality Assurance

- Unit Testing (Pytest, Jest)
 - Integration Testing, Manual & Automated Testing
 - API Testing (Postman, Swagger/OpenAPI)
-

Personal Qualities

- Strong problem-solving and analytical mindset
 - Collaborative and adaptable team player
 - Passionate about tech communities and mentoring
 - Detail-oriented with focus on clean, secure code
-

Mission

I aim to use my extensive full-stack and systems development skills to design secure, scalable, and high-performance software solutions. With a background in software engineering, embedded systems, and cybersecurity from **Rwanda Coding Academy**, and a proven track record of delivering results, I'm ready to contribute to meaningful tech projects that make a lasting impact.

Experience & Projects

Client: Personal Project

Role: Full-stack Developer

Time: Date of completion 29 March 2025

Project Description:

- Developed a web-based Friend Store application allowing users to manage friends with full CRUD functionality (Create, Read, Update, Delete).
- Utilized **Python (Flask)** for backend API development and **JavaScript (React)** for a dynamic frontend interface.
- Implemented **SQLite** with **SQLAlchemy** for efficient database management.
- Enhanced the user interface using **Chakra UI**, offering a sleek and responsive design.
- Deployed the application on **Render**, making it publicly accessible.
- Designed the application with **light and dark mode** options for a personalized user experience.
- Ensured a clean development environment by setting up **virtual environments (venv)** and following best practices for app development.
- Optimized UI components to ensure full responsiveness across multiple devices

Project: CodeSync – Remote Interview Platform

Client: Personal Project

Role: Full-Stack Developer

Time: Date of completion – *32 March 2025*

Project Highlights:

- **Tech Stack:** Next.js, TypeScript, Stream, Convex, Convex
- **Core Features:**
 -  Video Calls
 -  Screen Sharing
 -  Screen Recording
- **Security & Authentication:**
 -  Authentication & Authorization (Clerk)
- **Development Approach:**
 -  Server Components, Layouts, Server Actions
 -  Client & Server Components
 -  Dynamic & Static Routes
- **UI & Styling:**
 -  Tailwind CSS & Shadcn

Project: Event Connect – Digital Event Management System

Client: Personal Project

Role: CEO, Project Manager, Frontend Developer & UI/UX Designer

Time: *Ongoing*

Objective:

Event Connect is an event management system designed to digitise event planning by connecting event planners with event owners. The platform enables users to register events such as festivals, weddings, and meetings while offering venue selection, ticketing, and related services.

Goals & Objectives:

- Digitalize the event preparation process.
- Streamline event registration and prepayment.
- Provide a platform for event organizers to find suitable venues and services.
- Enhance user experience and convenience in event planning.

Impact on Society:

- **Enhanced Local Economy** – Supports businesses by connecting them to event planners.
- **Efficient Event Planning** – Reduces manual work and simplifies event organization.

- **Improved Communication** – Strengthens collaboration between attendees and planners.
- **Increased Accessibility** – Enables users to discover and attend events easily.
- **Support for Local Artists & Entrepreneurs** – Promotes talent and business growth.

Uniqueness:

- **Unique User Experience** – A seamless and intuitive system for event discovery and participation.
- **User Engagement** – Facilitates interaction between attendees and event planners, fostering a vibrant community.
- **Revenue Potential** – Uses innovative algorithms for personalized event recommendations, boosting event discovery.

Team Members:

- **BYUMVUHORE Aimable** – CEO, Project Manager, Frontend Developer & UI/UX Designer
- **GITOLI Remy Claudien** – Data Analyst & Backend Developer
- **BIGIRABAGABO Blaise** – System Integrator & Backend Developer
- **ITANGAMAHORO Divine** – Market Research & Backend Developer
- **NKUNDABAGENZI Jeremy** – UI/UX Designer & Frontend Developer

Website: [Event Connect](#)

Client: Personal Learning Project

Role: Full-stack Developer

Time: Date of completion – 01 April 2025

Project Description:

- **Tech Stack:** React.js, Node.js, Express.js, MongoDB, Chakra UI.
- Developed a **RESTful API** using Node.js and Express.js.
- Designed a **responsive UI** with React.js and Chakra UI.
- Implemented **error handling** for a robust and smooth user experience.
- Deployed the project, ensuring **live accessibility**.
- Integrated **state management and authentication** for enhanced functionality.
- Explored **best practices in full-stack development** through this course.

Courses

📁 **BAI_Courses_files**

As a student at **Rwanda Coding Academy**, I have undergone a rigorous, industry-aligned, and project-based 3-year program designed to produce job-ready software engineers with strong technical, analytical, and problem-solving skills.

Certifications

My Certificates

- JavaScript Algorithms And Data Structures from **freecodecamp**
- Responsive Web Design from **freecodecamp**

Languages

- English – Fluent
- French – Intermediate
- Kinyarwanda – Native

Education

Rwanda Coding Academy (2022 – 2025)

Advanced Level, Software Programming & Embedded Systems

College du Christ-Roi Nyanza (2019 – 2022) – O-Level

EP Nyakibungo (2013 – 2018) – Primary

Hobbies

- Riding Bikes
- Playing Piano
- Watching movies
- Sawing
- Cooking
